Database Design
Spring 2015
NoSQL Case Study

Points: some points for the write up, some points for class participation

Submission Format: Online on D2L Dropbox as a PDF document

Due Date: Mar 25th at 7:00 pm. Late submissions will not receive a grade

The tasks for this deliverable are described below.

1. Create an Executive Summary

Read the SitWit NoSQL case study posted to D2L. Create an executive summary using no more than 1 page. This summary should demonstrate your understanding of not only the case itself but also your understanding of the technology used. Be clear and concise. You will lose points for random writing.

2. Make Your Choice

The company has a decision to make and the case presents 4 possible choices. Which choice would you select and why? Document and explain your selection in no more than ½ page.

3. Save your document

 Save your document to a PDF (nosqlCase_yourname.pdf). Ensure you have submitted your assignment to D2L. Many times, you have loaded your assignment, however, you have not submitted and I, therefore, do not have access to it. Also, ensure the document you submit to D2L can be downloaded and opened. If for whatever reason, I either cannot download your document or cannot open it, that is the same as not submitting it and you will receive a zero for the assignment.
